

ANNE CREALOCK, Planning And Program Manager, Marin Wildfire Prevention Authority

For the last two decades, Anne has worked in environmental planning, natural resources, water resources, climate adaptation, and fire resilience. While working for a water district in Sonoma County, Anne helped create and lead a collaborative effort to improve fire resilience to improve forest health, watershed health, public safety and protect water resources. A case study describing her work in the Lake Sonoma watershed is featured by the Governor's Office of

Planning & Research as part of the Integrated Climate Adaptation & Resiliency Program's Adaptation Clearinghouse. After the devastating fires of 2017, Anne trained to become a wildland fire fighter to help conduct prescribed burns across the North Bay and continues to serve on the steering committee of a prescribed burn association. Anne also led Sonoma County's team for natural resources recovery after the Glass and Walbridge fires of 2020. Anne's passion for fire resilience and climate adaptation brought her to the Marin Wildfire Prevention Authority (MWPA) in 2021 as the Planning & Program Manager where she has been working with consultants, stakeholders, and Member Agencies to build an environmental compliance program to address wildfire risk reduction projects efficiently while also incorporating ecological stewardship. To date, well over 30 vegetation management projects have gone through environmental compliance and are currently being implemented. Anne holds a Bachelor of Science in Biological Studies and a Master of Science in Environmental Studies.
